FUELSTAT® – Tried. Tested. Trusted.

FUELSTAT® provides simple rapid detection of microbial contamination in jet fuel, in just 15 minutes. Jet fuel microbial contamination can be extremely costly to aviation businesses. FUELSTAT® is the **lowest cost of result** and is the newest solution for commercial aviation in fuel management.

By identifying and helping you deal with fuel issues at the earliest possible stage, FUELSTAT® is a major breakthrough in results speed, customer service and affordability. Proponent is proud to bring our reputation for quality, competitive pricing and products available as Conidia Bioscience's Global Authorized Distributor for FUELSTAT®.

LAB-FREE METHOD

Traditionally, jet fuel testing methods have depended on samples being sent to a specialist laboratory for analysis. But with FUELSTAT®, you have access to a fast, easy-to-use testing method that can be performed **without a laboratory or additional equipment.**

The ultrasimple test only requires:

- 4 drops of sample
- 15 minutes
- 1 person to perform test

ALWAYS IN STOCK

A missed day of aircraft operations can cost more than \$200K in revenue. That's why we **always have a variety of FUELSTAT® Test Kits available**, with no minimum order quantity, so that you can avoid delays and keep on schedule.

Available kits include:

- P/N: FHR8-2 (box of 8 tests)
- P/N: HR-2-011 (single test kit)
- CAGE Code: KE385

ONLY 15 MINUTES TO RESULTS

FUELSTAT® offers rapid results for all your aviation needs. From sample to detailed analysis reports, you're **4 drops and less than 15 minutes away from clear results.** The easy-to-use test provides immediate visual verification of the results. There's no need for additional equipment other than your smartphone. You can view your full detailed report instantly in PDF format **with Conidia's free digital app**, so you can easily keep your aircraft up to date.

FuelStat is listed as a recommended product by IATA, approved by JIG and most major manufacturers.

UNIQUE TECHNOLOGY

Aviation fuel systems are ideal habitats for organisms and can induce corrosion if they go unchecked. FUELSTAT® unique technology **only searches for the markers of fuel contamination species and ignores all other microbes** that may be present but pose no threat to fuel systems and structures.
