CENTER CEILING STOWAGE+

The new Center Ceiling Stowage+ for Airbus A318, A319, A320, A321 aircrafts to increase the capacity in overhead stowage compartments.

CENTER CEILING STOWAGE+ upgrade

A smart solution by Lufthansa Technik and FACC.

The amount of cabin luggage is constantly growing. Yet boarding is prolonged when passengers are not able to store their belongings quickly, leading to costly delays in the flight schedule. At the same time, less frequently used equipment such as baby bassinets, wheelchairs, emergency equipment, crew luggage, galley equipment or newspapers takes up to 25 percent of the space in overhead stowage compartments – which is then not available for passenger belongings.

The CCS+ module uses the space available in the center ceiling area to store these items. It accommodates considerably 196 % more load than its predecessor (38.5kg/84lbs instead of 13kg/28.6lbs), and therefore is also suitable for heavier objects, such as life rafts. In addition, this solution can be installed at diverse positions in the aircraft (forward, center and aft). The short lead time to install the solution means that operators can react quickly to new circumstances.

FEATURES

- > Weight (empty): about 20.5kg/45lbs
- > Payload: 38.5kg/84lbs
- > New enhanced structure connection for Part 145 companies
- > 50,000 life cycles (about 25 years)
- > Provisions for less frequently used equipment

BENEFITS

- > More space for bulky luggage, emergency equipment, crew luggage, galley equipment, newspapers
- > Reduction of costs caused by boarding delays
- > High flexibility with diverse positions (forward, center and aft position)
- > Short lead time
