PNEUMATIC & HYDRAULIC SEALING SOLUTIONS

K&S composite seals, gaskets, ducts, and sleeves can meet the toughest pressure, temperature, and dimensional tolerance requirements, solving your most demanding problematic applications.

K&S builds its products by combining woven fibers and elastomer in multi-layer preforms which are molded into the required shape. This process assures repeatable tolerances within .002 or .003 of an inch. The most popular composite blend, fiberglass cloth, and silicone rubber produces a product that will not lose seal or deteriorate at temperatures from -100 to +600 degrees Fahrenheit. K&S composite products are also well suited to high pressure applications which have been shown to perform without failure in environments in excess of 7500 psi.

K&S Enterprises is a proud American manufacturer.

CAGE Codes: OBLW7, 1KE04

ADVANTAGES OF PRODUCT IMPROVEMENT

Improved availability of parts in the market and offers a substantial cost savings over the OEM part without affecting the original form, fit or function.

Hazmat Statement: Parts manufactured by AAXICO Technical Services do not willfully contain hazardous materials and metals derived from minerals defined as “Conflict Minerals”. These include, but are not limited to, tantalum, tin, tungsten and gold.

For more information regarding “Conflict Minerals,” please refer to section 1502 of the Dodd-Frank Act.
